

Laporan Tugas 5 : Menjalankan Program Chat di Emulator

Nama : Joseph Eric Amadeo S.

NRP : 05111840000077

Kelas : Pemrograman Jaringan E

Soal:

Jalankan program chat tersebut di EMULATOR. lakukan menggunakan konfigurasi

- 1 mesin berfungsi sebagai chat server
- 2 mesin berfungsi sebagai chat client

buatlah interaksi antara 2 mesin client dengan server. lakukan aktifitas-aktifitas berikut ini

- authentication
- berkirim pesan antar user

dan capturelah ke dalam gambar, dan submitlah dalam bentuk 1 dokumen PDF. berikan PENJELASAN SINGKAT dari hasil capture anda

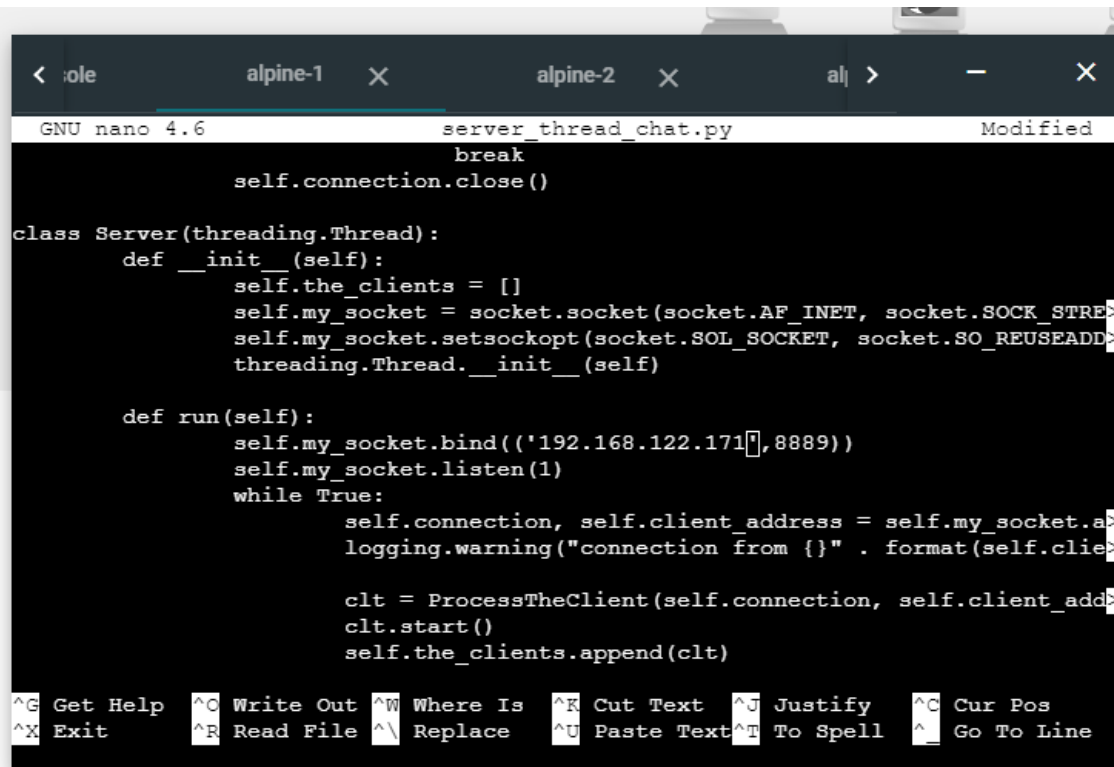

Jawaban:

1. Berikut topologi jaringan pada emulator yang digunakan:

2. alpine-1 dijadikan sebagai server, sedangkan alpine-2 dan 3 dijadikan sebagai client. Pertama-tama clone repository ke alpine 1 sd. 3. Setelah itu, pada alpine-1, ubah code server-thread-chat pada folder progjar4c sebagai berikut:

- Ganti ip menjadi ip server: alpine1 (dicek menggunakan ifconfig) pada bagian `self.my_socket_bind`. Pada kasus saya, saya menggantinya menjadi 192.168.122.171

```
GNU nano 4.6 server_thread_chat.py Modified
    break
    self.connection.close()

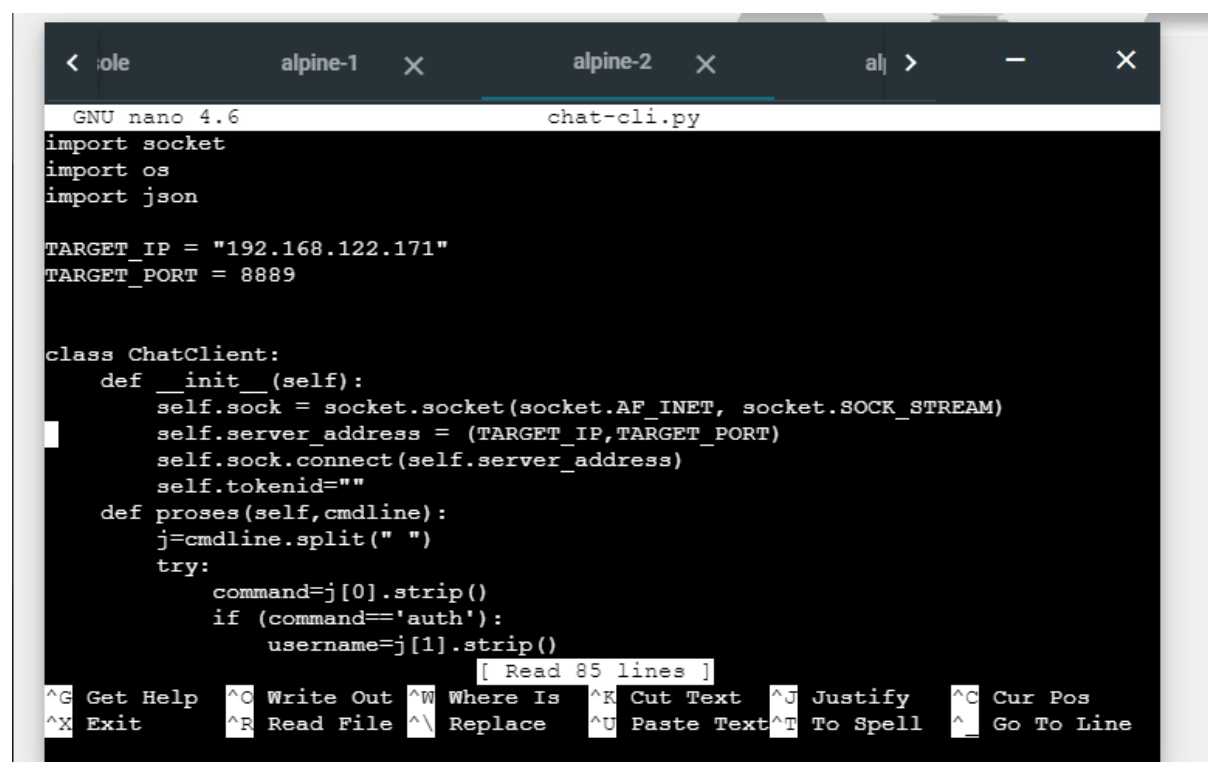

class Server(threading.Thread):
    def __init__(self):
        self.the_clients = []
        self.my_socket = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
        self.my_socket.setsockopt(socket.SOL_SOCKET, socket.SO_REUSEADDR, 1)
        threading.Thread.__init__(self)

    def run(self):
        self.my_socket.bind(('192.168.122.171', 8889))
        self.my_socket.listen(1)
        while True:
            self.connection, self.client_address = self.my_socket.accept()
            logging.warning("connection from {}".format(self.client_address))

            clt = ProcessTheClient(self.connection, self.client_address)
            clt.start()
            self.the_clients.append(clt)

^G Get Help ^C Write Out ^W Where Is ^K Cut Text ^J Justify ^O Cur Pos
^X Exit ^R Read File ^\ Replace ^U Paste Text ^T To Spell ^_ Go To Line
```

3. Pada alpine-2 dan 3, target IP diubah menjadi Ip server seperti diatas, yaitu: 192.168.122.171

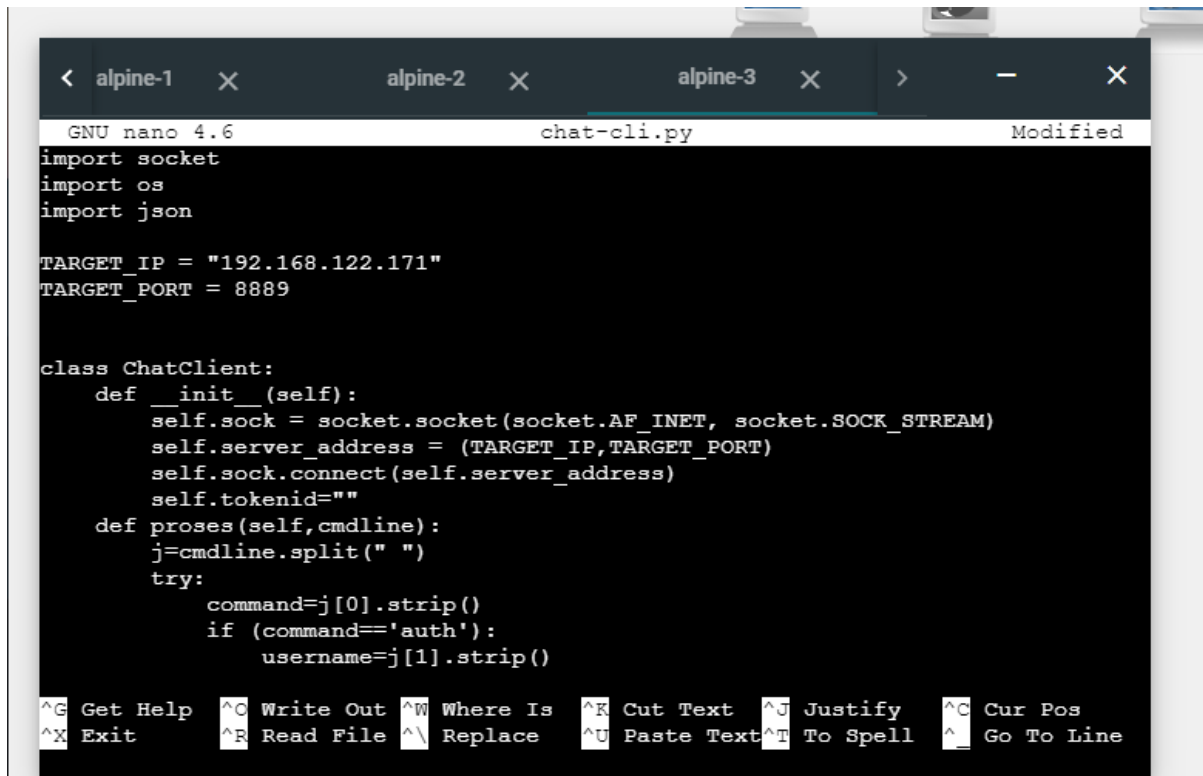

```
GNU nano 4.6 chat-cli.py
import socket
import os
import json

TARGET_IP = "192.168.122.171"
TARGET_PORT = 8889

class ChatClient:
    def __init__(self):
        self.sock = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
        self.server_address = (TARGET_IP, TARGET_PORT)
        self.sock.connect(self.server_address)
        self.tokenid=""

    def proses(self, cmdline):
        j=cmdline.split(" ")
        try:
            command=j[0].strip()
            if (command=='auth'):
                username=j[1].strip()

^X Exit ^R Read File ^\ Replace ^U Paste Text ^T To Spell ^_ Go To Line

4. Jalankan file server_thread_chat.py pada alpine-1:

```
RX packets:0 errors:0 dropped:0 overruns:0 frame:0
TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:0 (0.0 B) TX bytes:0 (0.0 B)

/Pemrograman_Jaringan_E/progjar4c # nano server_thread_chat.py
/Pemrograman_Jaringan_E/progjar4c # python3 server_thread_chat.py
```

5. Jalankan file chat-cli.py pada clients, yaitu alpine-2 dan 3. Setelah itu, lakukan autentikasi user dengan perintah **auth messi surabaya** untuk alpine-2 dan **auth henderson surabaya** untuk alpine-3:

```
< alpine-1 x alpine-2 x alpine-3 x > - x
